

E-cigarette* vs. Cigarette Exposures

Data from the Utah Poison Control Center

2016

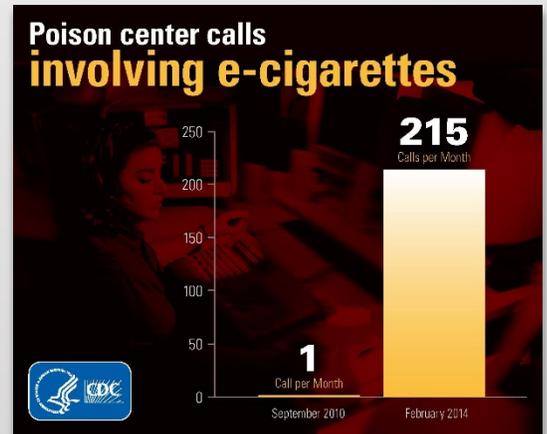

In 2009, the Utah Poison Control Center started receiving calls related to e-cigarettes and liquid nicotine poisoning exposures. While calls involving other tobacco products have remained consistent over the years, calls involving e-cigarette products have been on the increase. Children are at greatest risk for poisoning. As little as a teaspoon of e-cigarette liquid can be fatal. Children are attracted to the colorful packaging and flavors of liquid nicotine. It is important to store all nicotine products out of reach of children.

*E-cigarette cases include e-cigarette liquid and devices
